

NAOMHO

National Association of Manufactured Home Owners

THE MONTHLY **ADVISOR**

Insider Information Delivered When You Need It

Hello, *Sunshine!*

The sun is strong in many regions and temperatures are rising - Summer is quickly approaching, which means higher demands for energy.

Many manufactured homeowners already take necessary measurements to keep energy costs down. However, if you have just recently purchased your first property and are new to homeownership, we've created some content to inform and advise on how you can minimize your costs and impact on the environment.

Purchasing a manufactured home is already a smart move, as these homes are designed to be energy efficient. Click below to learn more about their benefits and your home's energy ratings.

Are Manufactured Homes
Energy Efficient?

What You Need to Know About Your
Energy Efficiency Ratings

8 Great Ways to **Conserve Energy**

1. Replace your traditional light bulbs to energy efficient bulbs.
2. Use smart power strips to reduce power used by inactive electronics.
3. Install a programmable thermostat.
4. Purchase energy-efficient appliances.
5. Use less hot water; insulate your heater; turn down the heater thermostat.
6. Raise the A/C temperature when away, especially during the day.
7. Use thermal curtains on windows to help block heat, and close them when away.
8. Shut off lights when they are not needed in unoccupied rooms.
